

US Execution For foreign brokers and institutions

Marco Polo's US Execution services, via MP Securities, enable our foreign clients to trade US markets over a single connection that is both faster and less expensive compared to other US brokers.

Broker Neutrality

Marco Polo is unique in that we do not compete with our clients. Rather, our mission is to provide US clients with access to emerging markets, and emerging market clients with access to the US and global markets. Period.

System Integration

Clients can effect Marco Polo's US Execution services through our proprietary front-end order management system (OMS), seamless integration with other third-party OMS and EMS (Execution Management System) including CMA, Bloomberg, and ITG, as well as through a direct API connection.

ADRs and ETFs

Marco Polo offers access to greater liquidity in ADRs (American Deposit Receipts) through its strong market maker relationships and its ability to create and unwind ADRs in local markets. Furthermore, Marco Polo has teamed up with the world's largest liquidity Exchange Traded Funds (ETF) provider, ensuring the efficient execution of large order blocks.

US Market Access

Marco Polo is offering its global network of foreign brokers and institutions the ability to access US markets and all major liquidity pools via their order routing FIX network, the Marco Polo trading solution platform or any FIX-based OMS/EMS. All orders pass through our Smart Order Router (SOR) server, accessing all of the to-rated execution venues, to provide the best available current price.

Best Execution / Clearing

With low cost Direct Market Access (DMA) to over 40 liquidity pools, both lit and dark, clients of Marco Polo's have access to sources such as NASDAQ, NYSE, ARCA, BATS, Direct Edge, etc, via a low latency SOR to every US Exchange dark pool and ECN (electronic trading platform). Our service offers the ability to process orders at the National Best Bid and Offer (NBBO), including the ability to configure routing strategies and utilize multiple order types. We also provide custodian, margin/ leverage, and onboarding typically within 1-3 weeks.

Trading Algorithms

Marco Polo provides Volume Weighted Average Price (VWAP), Time Weighted Average Price (TWAP), as well as other algorithms, that are continuously refining themselves by absorbing current and historical data to ensure that executions are performed within the volume curve and to give clients the option to execute orders via a specified time period to reduce market impact. We also provide a reserve feature, so that clients can place orders at a specific limit price, reflecting only the display size and hiding the full order size.

Marco Polo is about execution, reliability, and resiliency. We want to be the business partner that enables you to trade globally as well as provides liquidity to global emerging markets (GEMs). To ensure that you optimize our US Execution offering, we also offer the following complementary services:

Trading Solutions

Marco Polo offers trading solutions, such as order management systems (OMS), tailored to meet the specific needs of our clients. With its proprietary customizable interface, designed to make the user experience more intuitive, Marco Polo's OMS combines market data, trading strategies and execution services in a single screen, enabling access to over 100 markets. Capabilities include automatic matching, request for quote (RFQ), and auctions for primary and secondary offerings.

Chaperoning

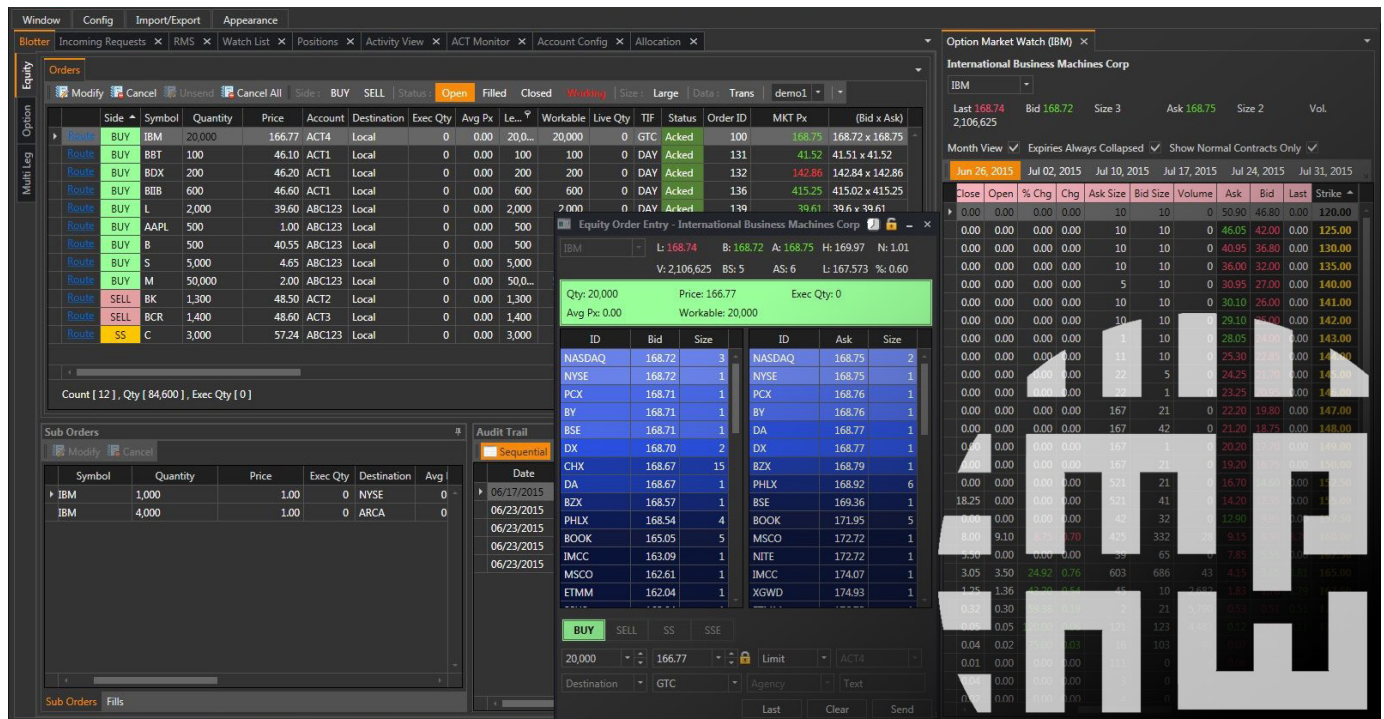

As a fully registered chaperoning broker by the US regulatory authorities (both FINRA® and the SEC), the Marco Polo team is current on the ever-changing and increasingly onerous regulatory landscape, ensuring that its foreign brokers maintain their registration exemptions from the Securities and Exchange Commission (SEC) – specifically SEC Rule 15a-6. As the pioneer in emerging and frontier markets, Marco Polo ensures that brokers are in full compliance with all local and global regulatory requirements.

Order Routing

Providing our clients with a FIX normalization service that enables certified brokers to trade with any counterparty on our platform regardless of the protocol employed, Marco Polo can certify clients within a fortnight. Once certified, clients can quickly and cost-effectively connect to any other broker on the Marco Polo hub.

Technology Redundancy

We offer a fully redundant trading application and network, ensuring a dynamic failover process. Real-time risk management and drop copies are also provided as part of our enhanced service.
